

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

Features

- Design for dimming application
- Serial interconnection length: 20m/per power module group
- High brightness LED as light source
- Dimming capability
 - Chromatic combination: RGB[0-255, 0-255, 0-255]
 - Brightness: [0-255]
- Easy for installation and maintainance
 - Full series of installation fixture
 - Large current throughput capability
- No visible gap between strips
- Network control option
 - 485 BUS interface
 - IR remote controller interface
 - Wireless remote controller interface
- Different network types
 - Broadcast
 - Duplex
- High uniformity
 - SNL[step non-linear error]< 0.2%
 - FRNL [full range non-linear error] < 0.2%
 - Difference of luminance output among strips: < 0.2%
- Adjustable light angle

Applications

- Outdoor decoration, especially high-end projects with brightness dimming and color changing requirement.
- In-door lighting, especially with dimming requirement
- Specific application with strict regulation on uniformity of brightness and/or color in large areas

Standards compliant

- EN61347-1
- EN61347-2-12
- EN61000-3-2
- EN61003-3-3
- EN55015
- EN61547
- GB7000.X
- GB 50034-2004
- GBJ73-84

Product description

Two types of hard LED strips have been developed: one with dimming capability and another without dimming capability.

The luminance output of each LED has been calibrated with a precise test instrument, and output error of 0.2% has been achieved; Regardless of application quantity, the error tolerance of

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

luminance from each LED is lower than 0.2%. choose , please refer to selection guide chapter.

The luminance output of each RGB chip inside a **Product Picture**

LED package has been calibrated and aligned to RGB[255:255:255] for a high precise color renderation. Regardless of application quantity, the error tolerance of luminance from each RGB chip is lower than 0.2%.

The hard LED strips can be connected in a network mode: broadcast and duplex. In broadcast mode, all hard LED strips receive instructions and display the luminance and color as defined; in duplex, besides of the display, all hard LED strips can send message upward to control center, including their working status, errors detected and warnings etc.

Independent relay module has been designed for network application. There are 3 communication types for relay: 485 BUS interface; Infrared interface; wireless interface. All can work in broadcast and/or duplex mode.

Different cable and terminals have been used for networked hard LED strips. For details, please refer to accessory chapter.

Different fixtures have been used for installation and light angle adjustment, please refer to installation and maintenance chapter.

There exist a series of hard LED strips, to

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

- Al frame
- Sealed by epoxy
- Stainless steel installation fixture
- IP68

control unit [Touch screen or PC]

- Connect hard-LED strips, maximum connection length is 20m with one power module.
- Connect HLS with relay modules
- Connect all cable terminals
- Power on
- Make corrections if necessary

Light Distribution Curve

Certification

- CE (under test for approval)
- 3C (under test for approval)
- UL (under test for approval)

Ordering Guides

Hard LED strips

Installation and Maintenance

It is easy and simple to get the Hard LED strip work, while more attention should be paid on network solution.

To make it easy:

- Send your solution to engineering solution department for review
- Select proper modules
- Install as instructed

Installation steps:

- Determine the location of power module and touch-screen (or PC)
- Connect T cable with power module and

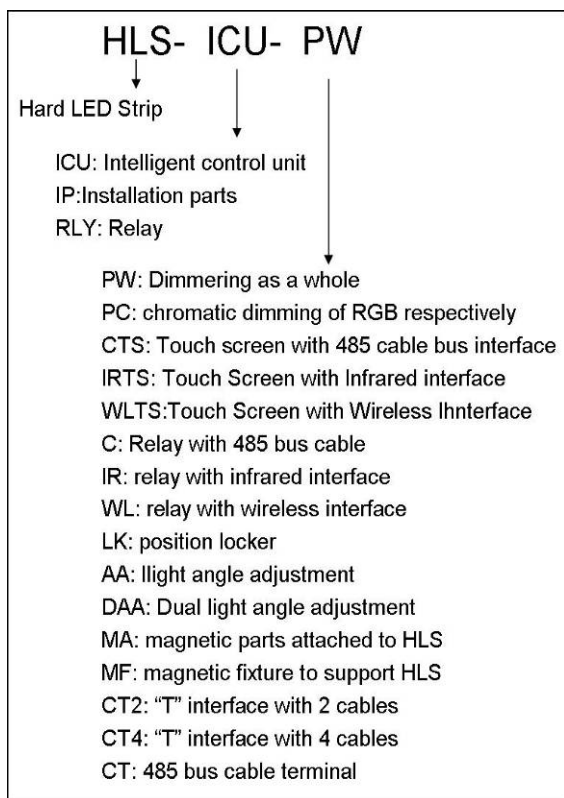

- The whole strip can be cut off to segments of different length.

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

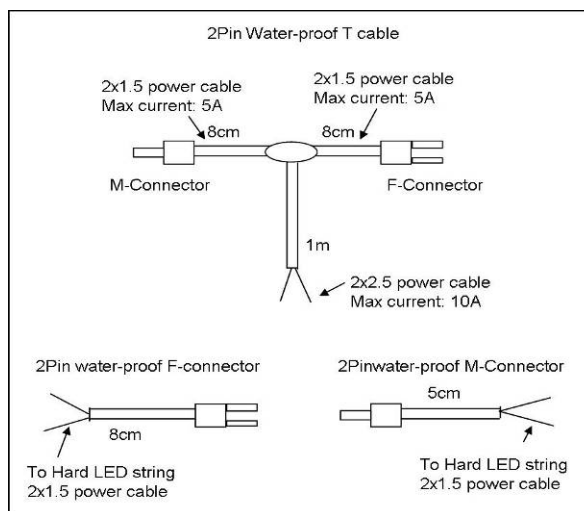

Product series		7010	4910	3510	3505
Without dimming (mm)	min	100	142.9	200	100
	Available	100*[1-10]	142.9*[1-7]	200*[1-5]	100*[1-5]
With dimming (mm)	min	400	400	400	400
	Available	400+100*[0-6]	400+142.9*[0-4]	400-200*[0-3]	400+100*[0-1]

- The LEDs with different color and different color temperature are available
- Two different types of strips are available
 - Without dimming
 - With dimming
 - ◆ Dimming only on luminance
 - ◆ Digital dimming of RGB chip respectively as RGB [255:255:255]
- Control units and network modules
 - Two work modes of network
 - 485 BUS network
 - Infrared network
 - Wireless network
 - Two work modes of network
 - Broadcast
 - Duplex
 - Cable terminals are required for 485 BUS network solution
 - Different topologies have been chosen to match customer requirements
 - Different data rate for network solution
 - 1.2Kbps
 - 15Kbps
 - 500Kbps (designed per customer's SPEC only, not available on open market)

Accessory- cables

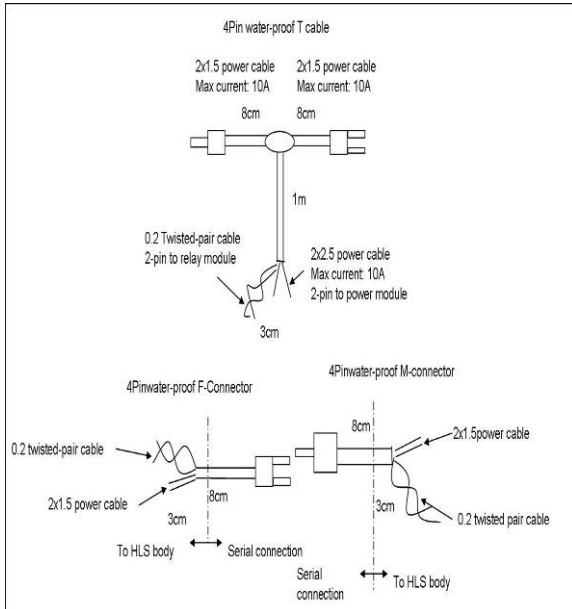

Cables for no dimming application

- Three network types with relay modules

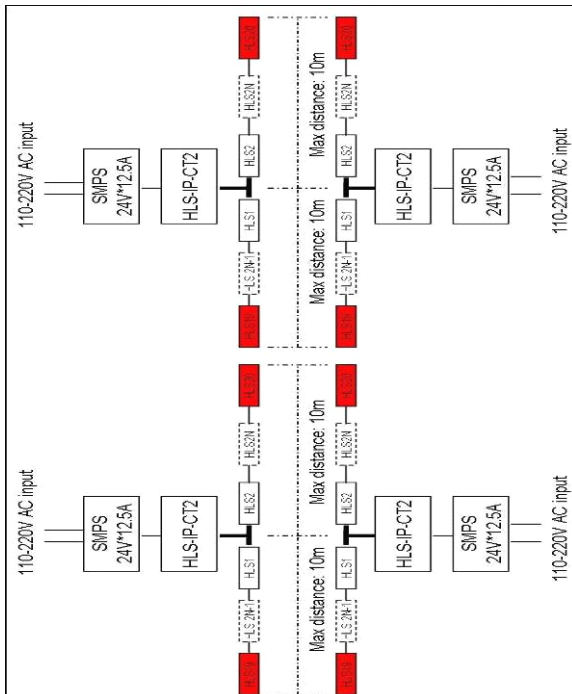

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

Cables for dimming application

Network demonstration

Network topology for no dimming application

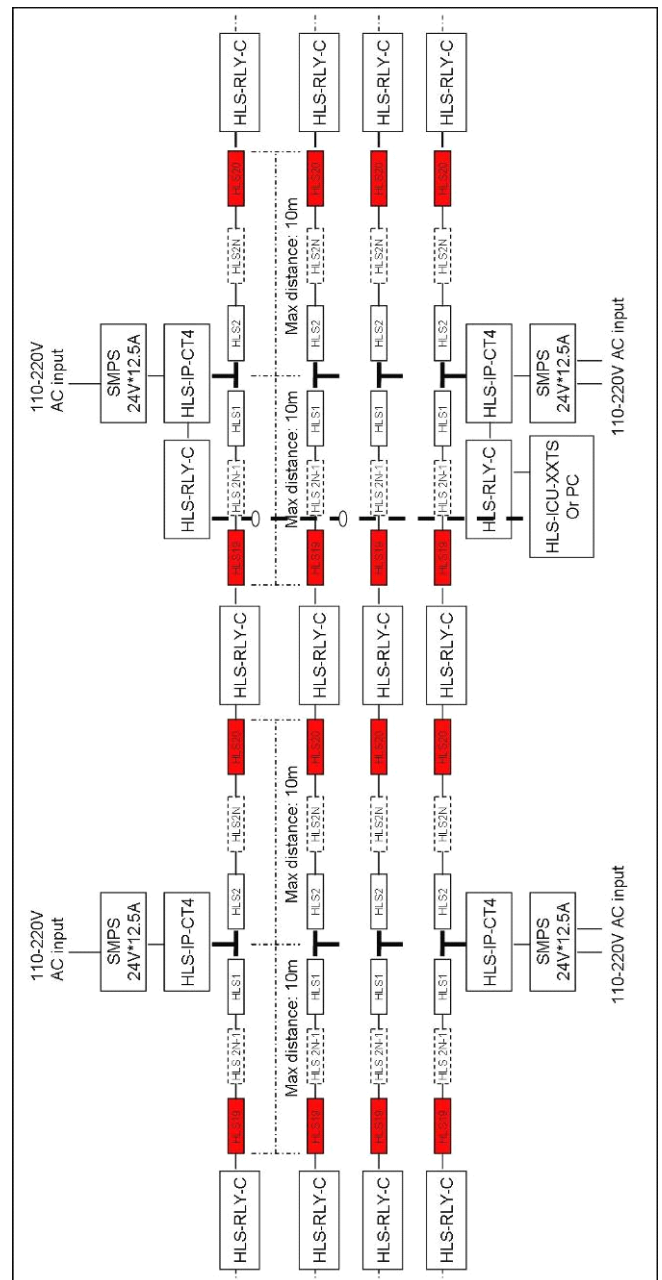

A relay has been inserted every 20m of HLS, in which the power cable has been terminated by OPEN connection, while twisted pair has been

terminated by a resistor.

Different twisted pair need a resistor of different value to terminate.

All connectors opening in air are water-proof parts, and need careful operations.

Network topology for dimming application

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

Technical Parameters

HLS-7010 series

		Conditions	Unit	Min	Typ	Max

Notes

Hard LED Strip Series Dimming Specific: Chromatic & Luminance

- All parts are under 24V, safe for hand operation
- Do not focus on the LED for long time in short distance
- Contact us for any network solution, the topology is simple, while the implementation should be done by trained technicians.
- There exist potential danger for any serial connection longer than 20m with one power supply module.

26	HLS-3505-G	Green, Length 0.5m, 35PCS 5050 LED	HLS-ICU-PW
27	HLS-3505-B	Blue, Length 0.5m, 35PCS 5050 LED	HLS-ICU-PW
28	HLS-3505-RGB	RGB combined, Length 0.5m, 35PCS 5050 LED	HLS-ICU-PW
29	HLS-ICU-PW	Control PCBA for dimming as a whole	
30	HLS-ICU-PC	Control PCBA for dimming of RGB independently	
31	HLS-RLY-C	Relay of 485 BUS	
32	HLS-RLY-IR	Relay of infrared communication	
33	HLS-RLY-WL	Relay of wireless communication	
34	HLS-ICU-CTS	Central control unit of 485 BUS, with Touch screen	
35	HLS-ICU-IRTS	Infrared Central control unit, with Touch screen	
36	HLS-ICU-WLTS	Wireless Central control unit, with Touch screen	
37	HLS-IP-LK	Installation fixture, locker	
38	HLS-IP-AA	Installation fixture, Light angle adjustment	
39	HLS-IP-DAA	Installation fixture, Light angle adjustment for Dual strips	
40	HLS-IP-MA	Installation fixture, magnetic attachment to hard strips "N"	
41	HLS-IP-MF	Installation fixture, magnetic support part "S"	
42	HLS-IP-CT2	Installation fixture, 2.5 power cable*2	
43	HLS-IP-CT4	Installation fixture, 2.5 power cable*2 + twisted pair *1	
44	HLS-IP-CT	Installation fixture, cable terminals	

*Red-word series have been developed per customers' requirement, please contact Engineering Solution Department for detail

*Black-word Series are ready for open market

Hard LED Strip Series

Dimming Specific: Chromatic & Luminance

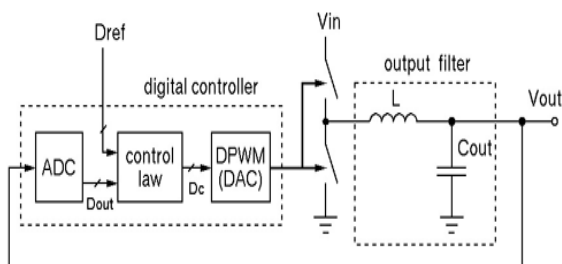

Digital PWM technology Brief

Digital PWM (Pulse Width Modulation) is attractive for their low power dissipation, immunity to analog component variations, compatibility with digital systems, and ability to implement sophisticated control schemes.

The quantization of the output voltage (V_{out}) in digital controllers can result in periodic oscillations of V_{out} (limit cycling) at frequencies lower than the PWM switching frequency, producing possibly undesirable output noise and electro-magnetic interference (EMI).

Controlled digital dither can increase the effective resolution of digital PWM (DPWM) modules, while minimizing the dither ripple incurred on the regulated output voltage

By dynamically adjusting parameters such as the synchronous rectification dead time and the current sharing in multi-phase converters, the power dissipation can be minimized

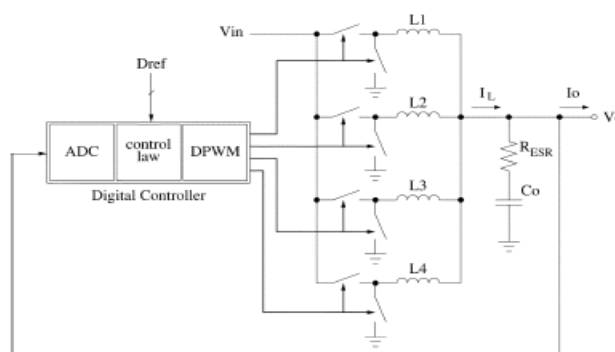

Multiphase converter has been used for high power requirement, while many elements have to be taken into consideration for a balanced output.

- Difference of load
- Difference of LC
- Difference of jitter on duty and timing

- Random noise effect

The control of DPWM is a complicated algorithm, while current DSP can take this job done easily.

The diagram of multi-phase DPWM technology

The transient response of DPWM

The advantage of DPWM

- Tuning continuously with high precision
- High speed
- Support complicated display requirement
- Parameters can be adjusted dynamically for defined optimization purpose

Hard LED Strip Series

Dimming Specific: Chromatic & Luminance

BUCK driver and dimming

BUCK converter can be used as a dimming driver as designed.

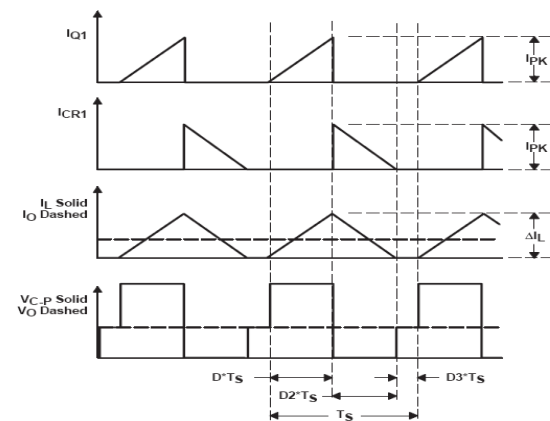

Buck converter work in 2 modes: continuous conduction mode and discontinuous conduction mode. In each mode, the current is tunnable by a PWM control signal in gate of POWER MOSFET

Continuous conduction mode: waveform as following

Discontinuous conduction mode: wave form as following.

Different work modes depends on the work

status of POWER MOSFET, and nearly all parameters of components will be modified.

To get a fine dimming, signal processing flow must be designed carefully.

- Digital input to PWM
- PWM to current output
- Current to luminance output
- The different characteristics of RGB LED chip for luminance output

By changing the duty, the output current [the same for output luminance] can be controlled, and a table is required to map the digital instruction to correct luminance output

- Non-linearity
- Different maximum luminance output of RGB LED must be aligned
- Different maximum luminance output of HLS must be aligned
